### **Periodic testing of photovoltaic (PV) inverter**

I am writing to advise that you are required to arrange for the PV installation located at **52 Mellor Circuit Florey ACT 2615** to be tested to ensure it is safe for continued connection to ActewAGL's network.

In accordance with ActewAGL's service and installation rules and guidelines for embedded generator connection to ActewAGL's low voltage (LV) network, the owner of the PV installation must ensure that the PV installation's anti-islanding protection is tested at least once every five years by a qualified and licenced electrician who holds a Clean Energy Council (CEC) accreditation.

ActewAGL's records show that your PV installation was connected to the ActewAGL network for more than five years and is due for testing. You must contact a CEC-accredited installer to have the test completed within 60 days of the date of this letter.

A list of CEC-accredited installers can be found at [www.solaraccreditation.com.au/consumers/find-an-installer.html](http://www.solaraccreditation.com.au/consumers/find-an-installer.html).

Alternatively, solar installation companies will have staff qualified to offer you this service.

The testing must be carried out in accordance with the attached Periodic PV Inverter Test Procedure and the test results emailed to the email address shown in the procedure.

A list of frequently asked questions is also attached for your information.

Periodic testing is an important part of the ongoing safety requirements of your PV installation and failure to complete testing may result in ActewAGL disconnecting your PV installation from the ActewAGL network.

If you have any questions or require further information please do not hesitate to call ActewAGL on (02) 6293 5749 between 9.00am and 4.00pm, Monday to Friday.
